EDUCATION

- **North China University of Technology** Beijing, China
BEng in Information Security, School of Artificial Intelligence and Computer Science
GPA: 84/100
Sept 2021 - June 2025
- **University of Glasgow** Glasgow, Scotland, UK
MSc Cybersecurity, School of Computing Science
Sept 2025 - Sept 2026 (Expected)

EXPERIENCE

- **IoT & Privacy Security Lab - North China University of Technology** Beijing, China
Research Assistant
Nov 2024 - June 2025 | 8 months
– Leading the development of an industrial control intrusion detection platform based on CNN-LSTM
– Supervisor: Prof. Gang Xu
- **State Key Laboratory of Complex and Critical Software Environments - Beihang University** Beijing, China
Research Assistant
Oct 2025 - present
– LLM adversarial jailbreaking research
– Supervisors: Prof. Xianglong Liu and Prof. Aishan Liu

PUBLICATIONS

- **Hierarchical Detection of Malicious Command Lines Using Random Forest and Context-Aware LSTM** May 2026
Yixian Jiang, et al. *Cyber Science 2026 Conference paper*
– Built a Rust-based prototype for detecting suspicious command-line activity using rule-based and machine-learning
– Implemented deobfuscation and feature extraction, compared performance of Logistic Regression, Random Forest, and LSTM

SELECTED RESEARCH PROJECTS

- **Industrial Control System Security Platform based on CNN-LSTM** Nov 2024 - June 2025
Undergraduate Thesis
– Implemented a CNN-LSTM model for real time anomaly-based intrusion detection in ICS
– Using Digital Twins to simulate the chemical plants in the real world and integrate alerting & cyber risk mitigation
- **LVLMS Adversarial Attacks** Oct 2025 - present
Research paper In Preparation
– Evaluated the adversarial robustness of LVLMS under the mixing visual-text prompt attacks in a controlled setting.
- **Programmable SDN Controller for Multi-Path Load Balancing** Jan 2026 - Mar 2026
Systems & Networks Project
– Built a Ryu/OpenFlow 1.3 controller for multi-path routing and programmable load balancing in Mininet
– Evaluated connectivity and throughput with Open vSwitch and iperf3 under constrained-link settings
- **Emoji++ Interpreter in Rust** Feb 2026 - Mar 2026
Secure Systems Programming Project
– Built a Rust command-line interpreter with file input, configurable memory, debug modes, loop control, and runtime error handling.
– Applied Rusts type system and explicit boundary checks to improve memory safety, and parser robustness.
- **Privacy Protection Scheme based on Blockchain and CP-ABE** Nov 2024 - Feb 2025
Collaborative Research with Beijing University of Posts and Telecommunications
– Implemented CP-ABE using Go to achieve fine-grained access control in multi-cloud environments
– Optimized user-side overhead by outsourcing storage and computation to the cloud
- **Consortium Blockchain-based Vehicle Trajectory Monitoring** Sept 2023 - Nov 2023
National Cryptographic Technology Competition
– Applied PBFT consensus to reduce energy consumption for resource-constrained vehicle nodes
– Secured trajectory data on-chain via identity verification and authoritative ledger nodes

TECHNICAL SKILLS AND INTERESTS

Languages: Python, Rust, C/C++, Java, Go, Assembly, SQL, Unix
Developer Tools: PyTorch, Hugging Face Transformers, Tensorflow, Scikit-learn
Areas of Interest: LLM Security & Privacy, Trustworthy AI, OT/ICS Security, Cyber Resilience

POSITIONS OF RESPONSIBILITY

•Class Representative at Cybersecurity MSc *Sept 2025 - Sept 2026 (Expected)*

ACHIEVEMENTS

- Third Prize, China International College Students' Innovation Competition Finals 2025 *Aug, 2025*
- Third Prize, North China University of Technology Mathematics Competition *June, 2022*
- Second Prize, National Final, the National Foreign Language Proficiency Competition *May, 2022*
- Innovation Scholarship in North China University of Technology *Sept, 2022*
